IBM PS/2 8511 and 8518 Color Displays HMS Diagnostic Guide

1.0 Diagnostic Guide

This section describes the procedures for diagnosing and correcting problems on the Color Display. Instructions on how to adjust the display are included.

Refer to the $IBM\ Personal\ System/2\ 8511$ and $8518\ Color\ Displays\ Hardware\ Maintenance\ Reference$ for details of how to get access to the controls on the video assembly.

DANGER

| Some areas of the analog and video card assembly (shown shaded in | Figure 1) carry high voltages. |

CAUTION:

Use extreme caution when making adjustments with the display powered on; these adjustments should not be performed unattended.

The display must never be left unattended with the covers removed and powered on in a customer environment.

DO NOT adjust RV100 (factory adjustment only).

To prevent electrical shock, power off the display and disconnect the power cord before you change any part.

High voltages may remain on the anode of the CRT after the display is powered off. Discharge in accordance with CRT safety instructions.

CRTs are under vacuum. All persons working near an exposed CRT must wear safety glasses and long-sleeved clothing (or comparable protection).

IBM PS/2 8511 and 8518 Color Displays HMS Initial Checks

1.1 Initial Checks

The initial checks, visual and power, confirm whether or not the display is ready for operation. $\,$

Subtopics 1.1.1 Visual check 0100

1.1.2 Power check 0110

IBM PS/2 8511 and 8518 Color Displays HMS Visual check 0100

Go to Power check.

IBM PS/2 8511 and 8518 Color Displays HMS Power check 0110

1.1.2 Power check 0110

Note: If you change the card tray assembly or the Integrated Tube Component (ITC), you must then check all the adjustments for the display.

|001|

- Remove the power cord from the power outlet, and then from the display.
- Set the power switch to On and to Off several times.

DOES THE POWER SWITCH OPERATE NORMALLY?

- Set the power switch to Off.
- Connect a power cord (that is known to be good) to the display and then to the electrical power outlet.
- Set the power switch to On.

IS THE POWER LED ON?

Continue with Self-Test.

IBM PS/2 8511 and 8518 Color Displays HMS Self-Test

1.2 Self-Test

The display must be powered on for five minutes before starting the test.

- Power off the display.
 Ensure that the signal cable is disconnected.
 Power on the display.
- 4. Set the contrast and brightness controls to maximum (from left to right).
- 5. The self-test pattern on the screen should be a full white raster (a pattern of horizontal scanned lines) with a black border 2 mm to 20 mm $\,$ (0.08 in. to 0.79 in.). The black border may not be on all four sides.
- 6. If the self-test pattern does not appear, go to "Basic Function Checks" in topic 1.3.

PICTURE 2

Figure 2. Self-Test Pattern

IBM PS/2 8511 and 8518 Color Displays HMS Basic Function Checks

1.3 Basic Function Checks

Basic functions can be checked using the self-test raster.

Refer to "Alignment Procedures" in topic 2.0 when adjustments are required after replacing components.

Refer to the IBM Personal System/2 8511 and 8518 Color Displays Hardware Maintenance Reference for removal and replacement procedures.

Symptom	Action
Any problems.	First, check all connections and
Green LED lit but test raster missing. 	Adjust G2 control clockwise until test raster appears AGAINST background raster. If no raster appears, replace ITC.
Test raster is not white.	Adjust gain controls for missing colors. If colors reappear, reset color point of ITC. Otherwise replace ITC.
Background raster is not white.	Adjust cutoff controls for missing colors. If colors reappear, reset color point of ITC. Otherwise replace ITC.
Test raster scan is collapsed horizontally or vertically.	If partially collapsed, adjust as appropriate. If fully collapsed, appropriate if fully collapsed, appropriate if the collapsed is a collapsed in the collapsed in the collapsed is a collapsed in the collapsed in the collapsed is a collapsed in the collapsed in the collapsed is a collapsed in the colla

Note: The integrated tube component (ITC) includes the CRT, yoke assembly, and associated components. The card tray assembly includes the video, analog, control, and ac inlet cards.

IBM PS/2 8511 and 8518 Color Displays HMS Pattern Checks

1.4 Pattern Checks

These symptoms relate to operating the display with a crosshatch pattern displayed.

Before starting any checks, ensure that all plugs and connectors are positioned correctly and securely.

Refer to "Alignment Procedures" in topic $2.0\ \mathrm{when}\ \mathrm{adjustments}$ are required.

Refer to the IBM Personal System/2 8511 and 8518 Color Displays Hardware Maintenance Reference for removal and replacement procedures.

+ Symptom	Action
Displayed image width is too large or too small.	Adjust RV303. If symptom persists, replace card tray assembly.
Displayed image height is too large or too small.	Adjust RV400. If symptom persists, replace card tray assembly.
Color purity of displayed image is poor.	Check degauss circuit. Ensure that P100 is connected. Power off for 30 minutes. Power on again to check degauss action. If symptom persists, replace card tray assembly. ITC defective. Replace ITC.
+	
Contrast or brightness controls are not working.	Check connections between P400 and P802. If good, replace card tray assembly.
Maximum or minimum white is poor.	Video color point is not set. Adjust as appropriate.
East west pincushion correction (EWPCC) is poor (vertical lines are bowed or barrel shaped).	Adjust RV302 for optimum vertical lines. If this is not possible, replace the card tray assembly.
No horizontal or vertical synchronization.	If good with test raster (signal cable disconnected), replace signal cable.
One or more colors missing.	
Displayed image does not synchronize horizontally.	Ensure that P300 is connected. If symptom persists, replace card tray assembly.
	Ensure that P300 is connected. If symptom persists, replace card tray assembly.
Displayed image is not centered horizontally.	Adjust RV304. If image cannot be centered, centering circuit is faulty. Replace card tray assembly.
+	·
Displayed image height varies excessively between modes.	Height selection circuit is faulty. Replace card tray assembly.
Displayed image appears broken up horizontally.	Width regulation is unstable. Ensure that P300 is connected. If symptom persists, replace card tray assembly.

IBM PS/2 8511 and 8518 Color Displays HMS Alignment Procedures

2.0 Alignment Procedures

CAUTION:

Use extreme caution when making adjustments with the display powered on; these adjustments should not be performed unattended.

The display must never be left unattended with the covers removed and powered on in a customer environment.

Refer to the IBM Personal System/2 8511 and 8518 Color Displays Hardware Maintenance Reference, for details of how to get access to maintenance controls.

All adjustments must be completed in the sequence given here.

IBM PS/2 8511 and 8518 Color Displays HMS Preliminary Steps

2.3 Preliminary Steps

1. Insert the IBM PS/2 Color Display 8518 Setup Diskette into drive A of the system unit.

Note: The IBM PS/2 Color Display 8518 Setup Diskette is used for setting up both the 8511 and 8518 Color Displays.

DANGER

| Use caution when making adjustments with the cover removed. There are | high voltages on the analog and video cards. |

- 2. Power on the system unit and the Display. The system unit runs its internal checks, and then loads the program from the diskette.
- 3. With the Brightness control set to center detent (midpoint), adjust G2 and Focus until the setup menu is visible. Select pattern C and adjust the G2 control to give minimum background illumination.
- Allow 20 minutes for the display to warm up before making any further adjustments.
- 5. Set the Contrast control to midpoint.

IBM PS/2 8511 and 8518 Color Displays HMS Geometry

2.4 Geometry

- 1. Select pattern A, green rectangle on a black background:
 - a. Adjust RV304 (Raster Centering) to center the rectangle.b. Adjust RV303 (Width) for a gap of:

```
16 mm (for 8511 Color Displays),
```

11 mm (for 8518 Color Displays),

(measured at the horizontal center line of the screen) between the vertical edges of the green rectangle and the inner edges of the

- c. Adjust RV302 (East West Pincushion) to set the most straight vertical lines.
- d. You may have to repeat steps a, b, and c.
- Using the same test pattern, adjust sequentially RV400 (Vertical Height) and RV401 (Vertical Centering). Set the picture in the center of the screen with a gap of:
 - 11 mm (for 8511 Color Displays),
 - 7.5 mm (for 8518 Color Displays),

(measured at the vertical center line of the screen) between the horizontal edges of the green rectangle and the inner edges of the top and bottom of the bezel.

IBM PS/2 8511 and 8518 Color Displays HMS

Video Levels and Cutoff Voltages

- 2.5 Video Levels and Cutoff Voltages
- 1. Select pattern C, black field:
 - a. Set RV600, RV631, RV651, and RV671 (cutoff potentiometers) fully clockwise, as viewed from the video card shield.
 - b. Set RV632 and RV652 (gain potentiometers) fully clockwise, as viewed from the top of the video card.
 - c. Set the Brightness control to center detent (midpoint), and the Contrast control to midpoint.
 - d. Adjust G2 so that the screen is just not illuminated. Set the Brightness control to maximum.
 - e. Adjust the cutoff potentiometers for a correct white color point.
 - f. Set the Brightness control to center detent (midpoint). If necessary, adjust G2 to ensure that the screen is just not illuminated.
- 2. Select Pattern B, white block.
- 3. Ensure that the Contrast control is at midpoint.
- 4. Adjust RV652 (green) and RV632 (red) for correct white color points.
- 5. Set Contrast to maximum.6. Set RV600 to midpoint.
- 7. Select pattern E, gray scale blocks.
- 8. Check, at maximum and minimum contrast, that the gradation of the blocks is even from black through white with no color tinges.
- 9. Check that there is no color smearing.

If steps 8 and 9 are not satisfactory, repeat this complete procedure.

Note: The use of a color analyzer is recommended for steps le, 4, and 6.

Subtopics

2.5.1 Procedure Using a Color Analyzer

IBM PS/2 8511 and 8518 Color Displays HMS Procedure Using a Color Analyzer

2.5.1 Procedure Using a Color Analyzer

The use of a Minolta TV Color Analyzer (**), or equivalent, is recommended for setting the white color point and maximum brightness.

- 1. Select pattern C, black field:
 - a. Set RV600, RV631, RV651, and RV671 (cutoff potentiometers) fully clockwise, as viewed from the video card shield.
 - b. Set RV632 and RV652 (gain potentiometers) fully clockwise, as viewed from the top of the video card.
 - c. Set the Brightness control to center detent (midpoint), and the Contrast control to midpoint.
 - d. Adjust G2 so that the screen is just not illuminated. Set the Brightness control to maximum.

 - f. Set the Brightness control to center detent (midpoint). If necessary, adjust G2 to ensure that the screen is just not illuminated.
- 2. Select pattern B, white block.
- 3. Ensure that the Contrast control is at midpoint.
- 4. Adjust RV652 (green) and RV632 (red) for correct white color points. Using a Minolta Color Analyzer, or equivalent, in accordance with the manufacturer's instructions, this is:

 $x=0.297 \pm 0.01$, $y=0.320 \pm 0.01$.

- 5. Set Contrast to maximum.
- 6. Set RV600 using the color analyzer, to give 200 nits \pm 5nits (cd/m²) in the white block.
- 7. Select pattern E, gray scale blocks.
- 8. Check, at maximum and minimum contrast, that the gradation of the blocks is even from black through white with no color tinges.
- 9. Check that there is no color smearing.

If steps 8 and 9 are not satisfactory, repeat this complete procedure.

(**) Trademark of the Minolta Corporation. For a list of trademarks see page ${\tt FRONT_1}.$

IBM PS/2 8511 and 8518 Color Displays HMS Focus

2.6 Focus

- Select pattern D, red crosshatch pattern.
 Adjust the Focus control to give sharp vertical and horizontal lines. Take care not to disturb the G2 setting.

This completes the alignment procedures.

IBM PS/2 8511 and 8518 Color Displays HMS Degaussing

2.7 Degaussing

The effect of stray magnetic fields on the color purity of an ITC depends on the orientation of these fields with respect to the ITC. Color displays have a magnetic shielding system, consisting of a magnetic screen, internal to the ITC, and the shadow mask together with its mounting frame, to combat stray magnetic fields.

To be effective, the shielding system must be degaussed by applying a strong alternating magnetic field which decays gradually and symmetrically to zero.

This is achieved by using dual, positive temperature coefficient resistors (PTC) in conjunction with a degauss coil on the ITC. When the mains input voltage is applied to the display, the peak inrush current through the coil is limited by one half of the dual PTC, while the other half is heated by the current flow in it. Equilibrium is achieved when the heat in one half of the PTC is sufficient to prevent current flow in the other half, and consequently in the degauss coil.

When degaussing is required, for example, if a display is relocated, the heating associated with a degauss action means that another degauss action cannot be started until the circuit has cooled down.

Allow at least 30 minutes with the display powered off, before starting another degauss action.

IBM PS/2 8511 and 8518 Color Displays HMS

Tools and Test Equipment

3.0 Tools and Test Equipment
The following equipment is required to repair an IBM 8511 or 8518 Display:

IBM Personal System/2 system unit
IBM PS/2 8518 Color Display Setup Diskette (part 91F8838 for all
locations except EMEA; 87F3667 EMEA only)
Meter Lead kit (part 6428104), instead of jumper lead
Two rear-cover delatching tools (IBM part 59X6319)
Hex-head 2 mm trimming tool (part 39F8405)
Screwdriver (flat blade)
Socket set 1/4 in.-drive, (part 1650830)
Torx (**) kit (part 39F8407)
Nonmagnetic metric rule
Safety glasses.

 $\underline{\texttt{Optional equipment}} \colon \ \, \texttt{TV Color Analyzer (Minolta or equivalent)} \, .$

(**) Trademark of Textron Incorporated. For a list of trademarks see page FRONT_1.
